Art Unit: 3632

This is the third office action for application number 10/674,916, Accessory Mounting System for a Boat, filed on September 29, 2003.

Drawings

The drawings were received on June 30, 2006. These drawings are acceptable.

Response to Amendment

The indicated allowability of claims 6 and 8 is withdrawn in view of the newly discovered reference(s) to Weimerskirch. Rejections based on the newly cited reference(s) follow.

Cancellation of Claims

Claims 3, 7, 8, 10, and 13 have been canceled per applicant's request.

Claim Rejections - 35 USC § 112

Claims 1, 2, 4-6, 9, and 11 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1 has ambiguous claim terminology where it is unclear whether latter recitations of originally cited terminology are intended to refer to the originally cited terms. It is unclear if "a first enlarged width portion," in line 9 and "a second enlarged

Art Unit: 3632

width portion" in line 10 of the claim are intended to refer to the original recitation of the terms "a first portion" in line 4 and "a second portion" bridging lines 4 and 5.

Claim 1 recites the limitation "the accessory mount" bridging lines 5 and 6. There is insufficient antecedent basis for this limitation in the claim.

Claim Rejections - 35 USC § 102

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claims 1, 2, 6, and 9 are rejected under 35 U.S.C. 102(b) as being anticipated by U.S. Patent 5,322,296 to Weimerskirch. Weimerskirch discloses an accessory mounting device and track assembly comprising: an accessory mounting bracket (56); a slide connector (18a or 18b) including a first portion that fits within a track (32) and a second portion over which the accessory mounting bracket is slide to secure an accessory (22b), the accessory mounting bracket being slid over the slide connector in a direction generally parallel to the track; the slide connector including a first enlarged width portion that fits within the mounted bracket a second enlarged width portion that fits within the track, and a reduced width portion that connects to the first and second enlarged width portions; the slide connector being generally symmetrical in cross section and generally I-beam shaped; the accessory mounting bracket being a complementary shape to accommodated and receive the slide connector; the slide connector and the accessory mounting bracket being selectively positionable within the track in a plurality of locations; wherein the accessory mounting bracket and the slide

Art Unit: 3632

connector each have a plastic construction; wherein the slide connector includes at least two pieces (48 and 50); wherein an accessory (22b) is mounted to the accessory mounting bracket;

Allowable Subject Matter

Claims 4, 5, and 11 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claims 12 and 14-36 are allowed.

Response to Arguments

Applicant's arguments with respect to claims 1, 2, 6, and 9 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

U.S. Patent 6,481,679 to Bennett et al.

U.S. Patent 6,698,603 to Lawson et al.
